

Nadia Mazzino
Senior Director Control Center Integration & Advanced Services
Hitachi Rail

Nadia Mazzino has 30 years of experience at Hitachi Rail in the area of railway systems and integration. Starting as referent of a software development team, then coordinating delivery activities, she spent 10 years as the Head of Innovation Projects with accountability for European and National research initiatives with specific focus on Digitalization, leveraging IoT technologies, new HMI concepts and Big Data applications.

Since 2018, Nadia has led the development of new products and platforms for the digital evolution of Integrated Control Centers for Railways and Metro systems. She is accountable for the definition and application of digitally integrated value-added services for operation and maintenance, leveraging data produced by railways and metro core systems and IoT integrated technologies as well as the introduction of AI based solutions for supporting the overall management of complex rail operations.
